Dutch Rudico Holding relies on ARAMIS from QBF

“Agreements are always adhered to!” is an important promise made by Rudico B.V., Felco B.V. and Korn-Klischee GmbH to their clients. All three belong to Rudico Holding whose headquarters are in Eerbeek, Netherlands. While Rudico B.V. and Korn-Klischee GmbH which is based in Northeim offer the latest prepress services for the packaging industry, Felco delivers precision print products with an 8-colour plus paint CNC machine from Fischer & Krecke with a printing width of up to 245 cm. Felco, which is also based in Eerbeek, is the first independent company in Europe which has specialised in short grain printing. In order to adhere to their client agreements more efficiently in the future, Rudico Holding recently opted for the introduction of the MIS solution ARAMIS. The established business solution of QBF in Cologne fulfils several important qualifications. That way, both prepress companies can use the well-engineered scope of operation of ARAMIS, the market leading MIS in Germany for packaging prepress, specifically for themselves. In this connection, the system’s high flexibility and its integration ability count especially in order to optimally utilise Rudico B.V.’s assembly capacity which is the largest in Europe. The individual adaptability of ARAMIS furthermore enables one to perfectly show the special requirements of the WideWeb specialist Felco especially during paper roll management for short grain printing. For this purpose, a barcode scan and print system is connected to the MIS especially for Felco. In connection with a touch-screen terminal, even the fork-lift operator in warehouse management is involved. Felco is hoping to benefit from a significant increase in efficiency when handling the net and gross paper rolls. The claim “Felco is always up to date” is once again served. Another reason for “Rudico-Felco-Korn’s” decision for ARAMIS is the multilingualism of the system. Therefore, not just Dutch is available for the MIS clients; ARAMIS can give out product descriptions, forms as well as text blocks for correspondence at the touch of a button in the desired language. Data exchange between the Rudico Holding companies is once again simplified. The “Go-Live” by ARAMIS at “Rudico-Felco-Korn” is planned for early 2009.
