QBF's long-time business partner EskoArtwork confirms leadership of ARAMIS

For many years, QBF and EskoArtwork® have been successfully cooperating as specialists for the packaging prepress stage. In the latest overview of common customers, ARAMIS is the leading partner-MIS for EskoArtwork®, with 29 use cases, and the only one named for the prepress sector. The creation of numerous interfaces (JDF/JMF) is a joint response by both industry specialists, to the many clients who have requested an automated exchange of data to avoid duplicate entries and errors as well as increase efficiency. This is not just possible between ARAMIS and BackStage®, but also to ArtPro® (for example to for automated creation of print cards and info-boxes on proofs), coming from a CDI (data for an invoice), or between the QBF internet portal and the soft proof system WebCenter®.
