UnderCover GmbH reckons digital printing with ARAMIS

UnderCover GmbH which is located near Stuttgart has been offering different prepress services from DTP to digital photography to Computer Generated Imagery (CGI) for many years. UnderCover GmbH convinces its clients especially through the combination of highly qualified employees and the latest technology. That way, processing time can be considerably reduced and clients' wishes are realised rapidly. UnderCover has been using the ARAMIS business solution for many years as a corresponding effective job management solution. The software from QBF (The Quick Brown Fox GmbH) in Cologne significantly reduces time expenditure in the connection of commercial administration with order management and activity input. Additionally, one uses the ARAMIS interface to OPAS-G at UnderCover in order to automate the creation of client media databank when the order is entered.

Since 2007, UnderCover has been offering high-end digital printing on HP Indigo 5000. The expansion of the portfolio by this service has resulted in new standards in order calculation and settlement. QBF developed a comprehensive and at the same time effective ARAMIS digital printing costing for these claims. Here, all details from planning different partial performances up to further processing of the digital printing can be compiled and calculated. Through these new possibilities in ARAMIS, UnderCover stays in a position to administrate all orders centrally via one job management solution; an important requirement for the mode of operation of the company based in Leinfelden-Echterdingen laid out on efficiency and the shortest delivery periods. Apart from digital printing costing, QBF which has been developing business solutions for all prepress sectors for the last two decades offers an internet client portal for handling digital printing orders. That way, especially in case of many small editions, the cost of offer preparation is further reduced and at the same time client service is increased.

Cologne, May 2008
